

SERVICE CENTER USER AGREEMENT: STANFORD CRYO-EM CENTER (CEMC)

- 1. Use of data:** All data are intended for research use only and are not intended for human or animal medical diagnosis.
- 2. Data Ownership & Responsibility:** Raw data belongs to the researcher. Researchers are responsible for obtaining and storing their data files. Data can only be stored on our servers for 30 days before the Service Center can delete data.
- 3. No Liability:** All data and materials are provided as a service to the scientific research community. The Services are provided on an "as is" and "as available" basis. Service Center makes no representations and extends no warranties of any kind, express or implied. User hereby acknowledges that the Services are experimental and exploratory and that no particular results or outcome can be guaranteed. User also acknowledges that changing the scope of work may impact the cost of work.
- 4. Materials:** Researchers agree to pick up any residual samples, reagents, supplies, or other project-related materials within 30 days of project completion, and grids and data can only be stored for 30 days. Otherwise, they can be disposed of by the Service Center.
- 5. Authorship/Acknowledgement:** As per the policy of the Office of the Senior Associate Dean for Research at Stanford Medicine, if data obtained from the Service Center's resources is used in a publication, the Service Center must be acknowledged ["Stanford Cryo-EM Center (cEMc)"]. Additionally, if Service Center personnel contribute intellectual resources to the work (including, but not limited to, data interpretation, experimental design, and manuscript preparation outside the Materials and Methods section), the personnel should be listed as a co-author on the publication. Authorship does not exclude payment of charges accrued for the work, as the materials and personnel time must be compensated.
 - A. **Importance.** Publications are an important metric for a Service Center's impact, and publications help secure financial support from Stanford. Authorship/acknowledgement of the core lab is crucial in supporting ongoing shared resource operations and development, as well as in acquiring future instrumentation and capabilities. The Service Center is staffed by professional scientists and deserve recognition for their efforts. Proper authorship further supports the Service Center's personnel in their careers.
 - B. **Assistance.** Service center scientists are available to assist with technical content, review, and method write-ups.
 - C. **Guidelines.** [ABRF Recommended Guidelines for Authorship on Manuscripts](#) provides further guidelines regarding authorship and acknowledgements.
